Profile

I am an Artificial Intelligence Solutions student and Research Trainee, currently starting my third semester at the University of Applied Sciences Upper Austria, while also working remotely as a Research Trainee on a time-series analysis project for the HUN-REN Wigner Research Centre for Physics, which has been an ongoing project for almost three years.

Education

Artificial Intelligence Solutions Sep 2025 – present
University of Applied Sciences Upper Austria *Hagenberg i. Mkr., Austria*

- Courses in Supervised Machine Learning, Symbolic AI, Unsupervised Machine Learning, Neural Networks and Deep Learning.
- Programming in Python and C++.
- Future courses (in SS 2027): Computer Vision, Embedded AI, Generative AI & Natural Language Processing.

Experience

Tutor Oct 2026 – present
University of Applied Sciences Upper Austria *Hagenberg i. Mkr., Austria*
Faculty of Informatics, Communication and Media

Working as a Tutor / Teaching Assistant in class MAT1 – Basics of Linear Algebra and Calculus in the degree program Artificial Intelligence Solutions BSc.

- Providing in-class help to the lecturer by guiding students with their tasks.
- Coordinating task distribution with other tutors and lecturer.
- Checking and marking students' uploaded assignemnts in Moodle.

Research Trainee Sep 2025 – present
HUN-REN Wigner Research Centre for Physics *Budapest, Hungary*
Department of Compuational Sciences

- Working on time series analysis anomaly detection with the ALT method.
  - Creating our own artificial dataset for our anomaly detection;
  - Review previous research and publication;
  - Finding time series databases – containing anomaly – appropriate for the project's purporse.
- Mentoring & guiding high school students in their research project involving first time-series classification, then later on edge detection (Computer Vision).

Research Assistant Jul 2026 – Sep 2026
HUN-REN Wigner Research Centre for Physics *Budapest, Hungary*
Department of Compuational Sciences

- Research-oriented software developement: created Python package `artificial-dataset` to be used for creating time-series anomalious datasets.
- Practical implementation and experimentation with machine-learning approaches for anomaly detection, including Isolation Forest, Local Outlier Factor, and autoencoder-based anomaly detection.
- Experience in evaluating anomaly-detection models using quantitative performance metrics, comparing different approaches and interpreting their results in a systematic manner.
